Art Unit: 2682

DETAILED ACTION

Allowable Subject Matter

Claims 17 and 18 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 17 teaches towards a radio communication terminal having a built-in battery comprising voice communication means for communicating a voice signal, image communication means for communicating an image signal, a power supply detector that detects if power is supplied from an external power source, and a controller that controls the voice communication means and the image communication means based on the detection by the power supply detector, wherein the voice communication means and the image communication means are available any time the power is supplied from the external power source, and the voice communication means is available when the power is not supplied from the external power source.

Claim 18 teaches towards a radio communication terminal having a built-in battery comprising voice communication means for communicating a voice signal, image communication means for communicating an image signal, a power supply detector that detects if power is supplied from an external power source, and a controller that controls a transmission speed, the voice communication means, and the image communication means based on the detection by the power supply detector, wherein the voice communication means and the image communication means are available and the controller controls the transmission speed at a first speed any time

Application/Control Number: 09/354,945

Art Unit: 2682

when power is supplied from the external power source, and the voice communication means and the image communication means are available and the controller controls the transmission speed at a second speed that is slower than the first speed when the power is not supplied from the external power source.

The prior art in combination (Nakaya in view of Flynn) discloses a similar invention, however such a combined invention discloses a device which merely controls its speed and image/speech processing based on battery levels. Thus plugging a battery in to the Nakaya/Flynn device when the battery is low will result in the device still limiting use to speech, whereas the instant invention automatically allows the other uses whenever the battery is plugged in, keeping the user from having to wait for the battery to charge before using the higher quality communications abilities of the device.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles R. Craver whose telephone number is 571-272-7849. The examiner can normally be reached on M-F 8:00-5:00.
